

RDX® Cartridge Encryption

Tandberg Data RDX Cartridge Encryptor (RCE) is a free Windows-based encryption software that allows users to integrate encryption on RDX media.

With a simple software installation, Tandberg Data RCE provides RDX customers with the ability to secure their data and take advantage of leading security methods. Along with storing their data on rugged and removable RDX media, users can add additional protection with secure cartridge encryption from Tandberg Data.

RCE is compatible with all past and future RDX drives, and all brands and generations of RDX media. RCE can be used with existing software solutions.

RDX Technology Overview

RDX technology is an economical and easy-to-use removable disk-based storage system for small and medium-sized businesses. The technology combines the best of tape storage—reliability, portability, long archive life and low cost with the best of disk—speed, random access and ease of use.

RDX media is available from Tandberg Data in hard drive and solid-state disk drive capacities ranging from 64GB to 2TB. High native storage capacities combined with speeds of up to 180 MB/s. mean full backups can be performed every day in much less time than it takes to do incremental backups to other entry-level storage products.

Today's RDX-based solutions include single drive systems; LAN-attached disk-based appliances; and RDX® QuikStation™ removable disk arrays. RDX systems are used by organizations for data storage, backup, archive, disaster recovery and cloud seeding, among other applications.
